SUMMARY

AI Engineer / Software Engineer with 5+ years of experience building **distributed backend systems**, **full-stack applications**, and **production AI workflows** in .NET, Python, and TypeScript, applying a microservices, event-driven, and cloud-native foundation to RAG, AI agents, and LLM evaluation.

SKILLS

- **AI Engineering:** LLMs, RAG, AI Agents, LangChain, LangGraph, LangSmith, MCP, AWS Bedrock, Embeddings, Vector Search, LLM Evals
- **APIs, Data & Messaging:** REST, GraphQL, Kafka, RabbitMQ, SQL Server, PostgreSQL, MongoDB, Redis, Snowflake, EF Core
- **Languages & Frameworks:** C#, ASP.NET Core, Python, FastAPI, TypeScript, JavaScript, Node.js, React, Next.js, React Native, Java, Spring Boot
- **Cloud & DevOps:** AWS, Azure, Docker, Kubernetes, AKS, Azure DevOps, GitHub Actions, Jenkins, CI/CD, Git

WORK EXPERIENCE

AI Engineer

Progress Residential - Phoenix, AZ

Feb 2026 – Present

- Built AI agents that triage **tenant maintenance requests** with tool calling, structured outputs, state management, and human-in-the-loop escalation, reducing work-order intake from **hours to minutes**.
- Cut projected batch AI evaluation cost by **>98%**, from **~\$50K to <\$1K**, via RAG, context-window optimization, and **model routing** to smaller models.
- Designed **RAG-based priority prediction** for incoming work orders over millions of Snowflake records, curating ~10K high-signal cases and applying embeddings, vector search, top-K retrieval, and confidence scoring.
- Built **LLM evaluation and observability pipelines** with historical replay, regression tests, hallucination checks, tracing, and cost/latency telemetry.
- Implemented configuration-driven **scheduling, routing, and work-order deadline logic** across **Palantir Foundry, Salesforce, Node.js** services, and **Next.js/React Native** apps, keeping scheduling APIs **backward compatible**.
- Built a team-wide **AI developer toolkit** of reusable agent skills, packaged as an **npm/MCP workflow**, giving coding agents shared context, engineering conventions, guardrails, and current documentation.

Software Engineer

Deloitte - Remote

Apr 2024 – Feb 2026

- Built **ASP.NET Core microservices** for a multi-state government benefits platform supporting **millions of users** per state, cutting **API latency by 15%** via EF Core tuning and **Kafka** async processing.
- Reduced data-retrieval time by **10%** with indexing and pagination; added **idempotency, retries, circuit breakers**, and Kafka dead-letter queues.
- Refactored centralized batch processing into **domain-owned .NET background workers**, reducing coupling and **peak-time latency by 10%**.
- Integrated an **LLM-powered claims assistant** into staff workflows, reducing average claim handling time by **30%**.
- Added end-to-end tests to the **CI/CD** pipeline with QA and DevOps, reducing release-related incidents by **15%**.

Software Developer

TravelHotline - Remote

Mar 2023 – Apr 2024

- Developed and launched a **React Native** travel app with authentication and booking features, improving app load time by **10%**.
- Built **30+ reusable UI components** that cut feature rollout time by **25%**, and integrated third-party APIs for data retrieval.
- Migrated backend services from C#/ASP.NET Core to **FastAPI**, reducing API response time by **35%**.

Jr. Software Engineer

MedImpact - Tempe, AZ

Jan 2022 – Feb 2023

- Built **React** internal tools and **Java (Spring Boot)** REST APIs for health-plan management, speeding up client request processing.

EDUCATION

- **Master of Science: Data Science**

Grand Canyon University

- **Bachelor of Arts: Business Administration**

Arizona State University
